

CLAIMS

What Is Claimed Is:

1. A light switch assembly comprising:  
a face plate member having a rigid perimeter portion and a flexible portion associated with said rigid perimeter portion;  
and  
means for illuminating said flexible portion.
2. A light switch assembly of claim 1 further including one or more switches in communication with said means for illuminating.
3. A light switch assembly in communication with an electrical box of a structure, said light switch assembly comprising:  
a face plate member having a rigid perimeter portion and a flexible portion associated with said rigid perimeter portion;  
means for illuminating said outer surface; and  
means for removably attaching said face plate member to an electrical box of a structure.
4. The light switch assembly of claim 3 further including at least one light switch in communication with said means for illuminating.
5. A light switch assembly comprising:  
a mounting member;  
a face plate member having a rigid perimeter portion;  
a flexible light assembly including a lighting sheet or lamp associated with said rigid perimeter portion; and  
means for energizing said lighting sheet or lamp, said means for energizing adapted for communication with a structure's supply of electrical energy, said means for energizing having at least one switch which is accessible through the flexible light assembly.
6. A light switch assembly of claim 5 wherein said at

least one switch is a plurality of switches.

7. The light switch assembly of claim 5 further including means for maintaining communication between said means for energizing and the structure's supply of electrical energy.

8. The light switch assembly of claim 5 further including a power source for powering said means for energizing when the structure's supply of electrical energy has been discontinued.
